Computer systems are well known in the art and widely used in a variety of different applications. Personal computer systems in particular are widely used due to their portability and user friendly nature. Personal computers are typically comprised of a microprocessor-based computer platform including a display device, such as a cathode ray tube (CRT) or liquid crystal display (LCD) monitor, a keyboard, one or more disk drives and/or other peripheral devices, and a plurality of software applications. Personal computers are available in many different form factors and sizes. While personal computers are typically configured for use as a stand-alone device, many users also use a computer to communicate through a communications network. For example, a typical user may access a computer on the Internet or World Wide Web (WWW) using a browser. The browser, in turn, is typically configured to utilize the Hyper Text Transport Protocol (HTTP) or a compatible protocol. Upon connection to the server computer on the Internet, the browser transmits a request (e.g., via the HTTP protocol) to retrieve a specified resource. The server computer then returns the requested resource to the browser. In this manner, the computer may operate as a client and be used to retrieve and render information. The graphical nature of the Internet and WWW provide a powerful and beneficial interface for many types of applications. However, the Internet and WWW have proven difficult to implement in the form of a computer system. Specifically, users are generally accustomed to using computer software applications in a graphical format such as a windows-based format. Yet, traditional WWW browsers are available only in a textual format (i.e., hypertext). Moreover, many WWW browsers are also text-only based and are not configured to execute applications. Thus, a user may be required to download and install a separate application on the computer to interact with applications on the WWW. The installation of multiple applications to interact with the WWW is inconvenient for many 82157476af
